

TIMOTHY NEWCOMB, *IT & CMS Specialist*
do good Consulting

Tim Newcomb has been helping non-profit organizations across Illinois fill technology needs for over ten years. His passion is helping non-profits increase both their understanding of technology and how it can be used to involve more people to reach organizational goals.

As Internet Technologies & Constituent Management Systems Specialist for ***do good Consulting***, Tim brings both public and private sector experience to clients and provides expertise in the areas of networking, application selection and integration, database management, server administration, as well as technology needs assessment.

As the network analyst for the Committee on Institutional Cooperation (CIC), Tim is actively managing web and file servers daily, developing web applications, training staff in desktop applications, and leveraging both commercial and open source software to further the organization's strategic directions. While at the CIC, Tim has helped to develop an online collaboration application based on Microsoft SharePoint technology to bring together over 1100 people in more than 50 websites to share knowledge, make policy, and develop shared resources.

Working with a small faith based children's aid non-profit organization, Tim created a network from the ground up including cabling, internet access, server selection, and installation of Active Directory and also assisted in locating low cost software and hardware options for organizational users. He also creates and maintains users, applications, and newsletter software for this organization.

Tim has managed networks sized from two computers to 300 with three locations across the United States.
